

### I. Proximal humeral anatomy is variable (Fig. 1a)

- A. Radius of curvature (RC) 20mm–30mm
- B. Head height (HH) = 3/4 (RC)
- C. Head shaft angle (HSA) 30°–55°
- D. Retroversion spans an arc of 50°
- E. Offset (OS) in both A/P and M/L dimensions
- F. Consistent with respect to:
  - 1. Surface Arc (SA) 150°–160°
  - 2. Head to tuberosity height (HT) < 1cm

(Fig. 1a)

## II. Prosthetic geometry differs from normal anatomy (Fig. 16)

- A. Head sits on a stem
- B. Head- stem junction
- C. Stem head angle (SHA) usually fixed
- D. Prosthetic head margins
- E. Metaphyseal shape/fins
- F. Stem shape/length
